PROJECT NUMBER:	1262.0
DATE:	July 6, 2023
SCALE:	AS SHOWN
DRAWN BY:	TSS
CHECKED BY:	TSS

GENERAL NOTES

1. The contractor shall furnish all material, labor and equipment and perform all work to deliver the completed improvements shown or implied as necessary for the completed project ready for use, inclusive of all site restoration and stabilization. Unless otherwise noted, specifications for all work to be in accordance with applicable the Virginia Department of Transportation, the Virginia Department of Environmental Quality, American Water Works Association standards, and Frederick Water Standards and Specifications.
2. All construction shall comply with the latest U.S. Department of Labor, Occupational Safety and Health Administration (OSHA), and Virginia Occupational Safety & Health (VOSHA) rules and regulations.
3. The contractor shall comply with title 59.1, chapter 30 section 406, et. seq. of the code of Virginia (overhead high voltage lines safety act).
4. The contractor shall comply with title 56, chapter 10.3, section 265, et. seq. of the code of Virginia (underground utility damage prevention act).
5. Access for emergency and utility maintenance vehicles shall be maintained. Access for all businesses shall be maintained.
6. The placement of a construction trailer, fencing, parking, and staging areas shall be coordinated with and approved by the property owner and developer.
7. **The contractor shall be responsible** for hiring a surveyor to provide construction surveying stake out.
8. **The owner shall be responsible** for hiring a testing firm to provide all earthwork and compaction testing.
9. The engineer has attempted to show all subsurface utilities, however, such may exist that are not shown. The contractor shall exercise care in this work so as to avoid damage to any utilities. Any damage shall be the responsibility of the contractor. The contractor shall notify Miss Utility of Virginia at least 72 hours prior to digging.
10. All disturbed surfaces shall be restored to the pre-construction condition by the contractor at the contractor's expense.
11. The Contractor shall ensure adequate drainage is achieved and maintained on the site during and at the end of construction.
12. Any unusual subsurface conditions (e.g., unsuitable soils, springs, sinkholes, voids, caves, etc.) encountered during the course of construction shall be immediately brought to the attention of the engineer. Work shall cease in that vicinity until an adequate design can be determined by the engineer and approved.
13. All fill areas, borrow material and undercut areas shall be inspected and approved by a the soils testing firm prior to placement and fill.
14. All surfaces and slopes shall provide positive drainage away from the building and parking areas
15. All fill areas, borrow material, footers, and undercut areas shall be inspected and approved by a the geotechnical engineer prior to placement of fill, aggregate, or concrete.
16. All subgrade material and backfill in the utility/storm sewer trenches, shall be placed and compacted in accordance with the requirements in the geotechnical report. Density tests shall be performed by the soils testing firm.
17. Existing structures, tanks, and other existing features designated to be removed or demolished shall be carefully removed and disposed of at an approved waste disposal site.

DRAINAGE NOTES

1. "H" Dimensions and top elevations shown on the plans are measured from the invert out to the top of the structure. "H" dimensions and top elevations are approximate and are provided for estimating purposes. Actual dimensions shall be determined by the contractor from field conditions.
2. All drainage structures shall meet the requirements of VDOT road and bridge standards and VDOT specifications. see details in this plan set.
3. All structures shall have vdot standard invert shaping IS-1. see detail in this plan set.
4. All storm drainage pipe materials shall be as shown on the profiles.

GRADING NOTES

1. All excavation is unclassified.
2. Materials - The material to be used in embankments shall be free of frozen or organic materials such as leaves, roots, grass, weeds, and all other material not consistent with construction of a stable, homogeneous fill. Embankments shall not be constructed on frozen ground. All proposed fill materials should be approved by the geotechnical engineer prior to placement, and representative samples should be obtained one week prior to placement of that material to allow time for completion of the necessary laboratory tests.
3. Site Preparation - All vegetation, rootmat, topsoil, asphalt and concrete shall be removed from areas upon which embankment will be constructed. Clearing shall extend ten (10) feet beyond the building and pavement limits, and one additional foot for each foot of proposed fill. Topsoil shall be stockpiled as required by the e&s plan. All sloping areas upon which fill is to be placed should be benched or "notched" so that a smooth interface between existing ground and new fill will not be present. Each layer of fill should be benched into the existing ground a minimum of 3 feet horizontally and the depth of one fill layer. Flat areas upon which fill is to be placed shall be deeply plowed to allow for bonding with the existing material. the controlled fill slopes and embankments should be constructed at the designed 2h:1v slopes or flatter.
4. Formation in Layers - All fill layers shall be constructed with materials and methods prescribed in the geotechnical report. Any soil placed as engineered fill should be an approved material, free of organic matter or debris. unacceptable engineered fill materials include topsoil, organic materials (oh, ol), construction debris and large rock. all such materials removed during grading operations should be either stockpiled for later use in landscaped areas or placed in approved disposal areas either on or off site. All frozen soil should be removed prior to continuation of fill operations. Borrow fill shall not contain frozen materials at the time of placement. All frost-heaved soil should be removed prior to placement of fill, stone, concrete or asphalt. It is recommended that processed shot rock be utilized as fill within the upper five (5) feet of finish subgrade to provide a weather resilient construction area which can be utilized to reduce concrete slab, pavement section thickness, or foundation size. ***The site contractor shall have means of providing water at all times during structural fill placement. The geotechnical report is entitled Report of Geotechnical Exploration, Honda Store, Frederick County, Virginia prepared by Triad Engineering, Winchester, VA.***
5. As the embankment is consolidated, the slopes shall be carefully dressed to the desired section and maintained to their proper height, dimensions, and shape until the work is accepted. When transporting material with rubber-tired equipment, care shall be taken to see that the trailing units do not follow in the tracks of the preceding unit. At the end of each day's work the embankment shall be dressed to shed any water that might fall during the night.
6. All blasting operations shall be performed in accordance with the Fire Marshall's requirements. The contractor shall protect the existing buildings, cars, site utilities and overhead power lines from fly rock and its associated damage.
7. If karst features such as caves, disappearing streams, or large springs are encountered during the project, contact Wil Ondorff of VA DCR (540-394-2552) to document and minimize adverse impacts.

WATER & SEWER NOTES

1. The public water and sewer lines are owned and operated by Frederick Water. All construction, connections and activities pertaining to the water and sewer lines shall conform to the requirements prescribed in the Frederick Water Standards and Specifications which can be found at
   https://www.frederickwater.com/sites/default/files/docs_forms_media/frederick_water_standards_and_specifications_2022-04-19_w_std_details.pdf
2. On site water and sewer facilities are currently owned by Carter Myers.
3. Manhole rims, valve boxes, etc. shall be adjusted to match the surrounding finished grade.
4. The contractor shall coordinate water and sewer construction with Frederick Water.
5. Location marker requirements - water line location markers shall be Scotchmark mid-range markers (wheel) part number 1257 or approved equal. sewer line locator markers shall be Scotchmark mid-range markers (wheel) part number 1258 or approved equal.

SIGN NOTES

1. BUILDING MOUNTED SIGN SHALL NOT EXCEED 20% OF THE WALL AREA OR 200SF TOTAL. INTERNAL DIRECTION SIGNS WILL ALSO BE UTILIZED.

OUTDOOR LIGHTING NOTES

1. OUTDOOR LIGHTING WILL BE INSTALLED IN ACCORDANCE WITH FREDERICK COUNTY REQUIREMENTS AND THESE PLANS.

STORMWATER MANAGEMENT NOTES

1. THIS PROJECT INCREASES THE IMPERVIOUS AREA OF THE SITE. STORMWATER QUALITY WILL BE MITIGATED THROUGH THE PURCHASE OF NUTRIENT CREDITS FROM A DEQ APPROVED SOURCE. STORMWATER QUANTITY WILL BE MANAGED WITH ONSITE SYSTEMS.

Virginia Department of Transportation

Staunton District
Rev. June 19, 2013

VDOT General Notes

V1. All work on this project shall conform to the current editions of and latest revisions to the Virginia Department of Transportation (VDOT) Road and Bridge Specifications and Standards, the Virginia Erosion and Sediment Control Regulations, and any other applicable state, federal or local regulations. In case of a discrepancy or conflict between the Standards or Specifications and Regulations, the most stringent shall govern.

V2. All construction shall comply with the latest U.S. Department of Labor, Occupational Safety and Health Administration (OSHA), and Virginia Occupational Safety & Health (VOSH) Rules and Regulations.

V3. When working within VDOT right-of-way, all traffic control, whether permanent or temporary, shall be in accordance with the current edition of VDOT's Work Area Protection Manual. A transportation management plan needs to be submitted for approval and land use permit issued prior to any execution of work within the VDOT right of way.

V4 The developer shall be responsible for relocating, at his expense, any and all utilities, including traffic signal poles, junction boxes, controllers, etc., owned by VDOT or private / public utility companies. It is the sole responsibility of the developer to locate and identify utility facilities or items that may be in conflict with the proposed construction activity. VDOT approval of these plans does not indemnify the developer from this responsibility.

V5. Design features relating to field construction, regulations, and control or safety of traffic may be subject to change as deemed necessary by VDOT. Any additional expense incurred as a result of any field revision shall be the responsibility of the developer.

V6. If required by the local VDOT Land Development Office, a pre-construction conference shall be arranged and held by the engineer and/or developer with the attendance of the contractor (s), various County agencies, utility companies and VDOT prior to initiation of work.

V7. The contractor shall notify the local VDOT Land Development Office when work is to begin or cease for any undetermined length of time. VDOT requires and shall receive 48 hours advance notice prior to any required or requested inspection.

V8. The contractor shall notify the Traffic Operations Center at (540) 332-9500 for any traffic control plan that impacts a VDOT maintained Interstate or Primary roadway to provide notification of the installation and removal of the work zone.

V9. The contractor shall be responsible for maintaining a VDOT permitted temporary construction entrance(s) in accordance with Section 3.02 of the Virginia Erosion and Sediment Control Handbook. Furthermore, access to other properties affected by this project shall be maintained through construction.

V10. Contractor shall ensure adequate drainage is achieved and maintained on the site during and at the end of construction.

V11. All water and sewer lines within existing or proposed VDOT right-of-way shall have a minimum thirty-six (36) inches cover and when possible shall be installed under roadway drainage facilities at conflict points.

V12. Any unusual subsurface conditions (e.g., unsuitable soils, springs, sinkholes, voids, caves, etc.) encountered during the course of construction shall be immediately brought to the attention of the engineer and VDOT. Work shall cease in that vicinity until an adequate design can be determined by the engineer and approved by VDOT.

V13. All fill areas, borrow material and undercut areas shall be inspected and approved by a VDOT representative prior to placement of fill. A VDOT representative shall be present to insure the soil sample(s) obtained for CBR's is representative of the location. When soil samples are submitted to private laboratories for testing, the samples shall be clearly identified and labeled as belonging to a project to be accepted by VDOT and that testing shall be performed in accordance with all applicable VDOT standards and procedures.

V14. All roadway fill, base, subgrade material, and backfill in utility/storm sewer trenches shall be compacted in accordance with the lift thicknesses, density and moisture requirements as specified in the current VDOT Road and Bridge Specifications. Certified copies of test reports shall be submitted to VDOT daily, unless specified otherwise.

V15. VDOT Standard CD and UD underdrains shall be installed where indicated on these plans and/or as specified by VDOT.

V16. A post installation visual/video camera inspection shall be conducted by the Contractor on all pipes identified on the plans as storm sewer pipe and a select number of pipe culverts. For pipe culverts, a minimum of one pipe installation for each size of each material type will be inspected or ten percent of the total amount for each size and material type summarized. All pipe installations on the plans not identified as storm sewer pipe shall be considered as culvert pipe for inspection purposes. Additional testing may be required as directed by the Area Land Use Engineer or their representative.

V17. The installation of any entrances and mailboxes within any dedicated street right-of-way shall meet VDOT minimum design standards and is the responsibility of the developer.

V18. Prior to VDOT acceptance of any streets, all required street signage and/or pavement markings shall be installed by the developer in accordance with the Manual On Uniform Traffic Control Devices.

V19. The developer shall provide the VDOT Land Development Office with a list of all material sources prior to the start of construction. Copies of all invoices for materials utilized within any dedicated street right-of-way must be provided to the local VDOT Land Development Office prior to acceptance of the work. Unit and total prices may be obscured.

V20. Aggregate base and subbase materials shall be placed on subgrade by means of a mechanical spreader. Density will be determined using the density control strip in accordance with Section 304 of the VDOT Road and Bridge Specifications and VTM-10. A certified compaction technician shall perform these tests. Certified copies of test reports shall be submitted to VDOT daily, unless specified otherwise. In addition to checking stone depths, a VDOT representative shall be notified and given the opportunity to be present during the construction and testing of the density control strip.

V21. Asphalt concrete pavements shall be placed in accordance with Section 315 of the VDOT Road and Bridge Specifications. Density shall be determined using the density control strip as specified in Section 315 and VTM-76. A certified compaction technician shall perform these tests. Certified copies of test reports shall be submitted to VDOT daily, unless specified otherwise. A VDOT representative shall be notified and given the opportunity to be present during the construction and testing of the control strip.

V22. In accordance with Section 302.03, the foundations for pipe culverts thirty-six (36) inches and larger shall be explored below the bottom of the excavation to determine the type and condition of the foundation. The contractor shall report findings of foundation exploration to the engineer and VDOT for approval prior to placing pipe. Foundation designs shall comply with VDOT Road and Bridge Standard PB-1. Where soft, yielding, or otherwise unsuitable foundation is encountered, the foundation design and/or need for foundation stabilization shall be determined by the engineer and approved by VDOT.

V23. VDOT Standard Guardrail shall be installed where warranted and/or as proposed on these plans in accordance with VDOT's installation criteria. Final approval of the guardrail layout to be given by VDOT after grading is mostly complete.

V24. Approval of these plans shall expire five (5) years from the date of the approval letter.

V25. VDOT Standard CG-12 Curb Ramps shall be installed where indicated on these plans and/or as specified by VDOT.

V26. The foundations for all box culverts shall be investigated by means of exploratory borings advanced below proposed foundation elevation to determine the type and condition of the foundation. The contractor shall submit copies of borehole logs and report findings of foundation exploration to the engineer and VDOT for approval prior to constructing box. Foundation designs shall comply with VDOT Road and Bridge Standard PB-1. Contrary to the Standard, where rock is encountered and cast-in-place box is proposed, the thickness of bedding shall be six (6) inches. Where soft, yielding, or otherwise unsuitable foundation is encountered, the foundation design and/or need for foundation stabilization shall be determined by the engineer and approved by VDOT.

PROJECT SUMMARY INFORMATION		
Owner	CMA Properties, Inc.	
Proposed Project Description	15,301 SF building addition and parking area revision

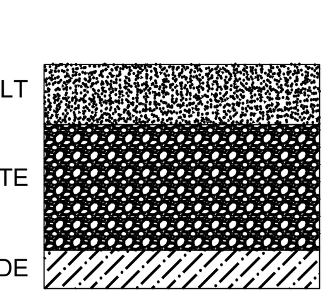
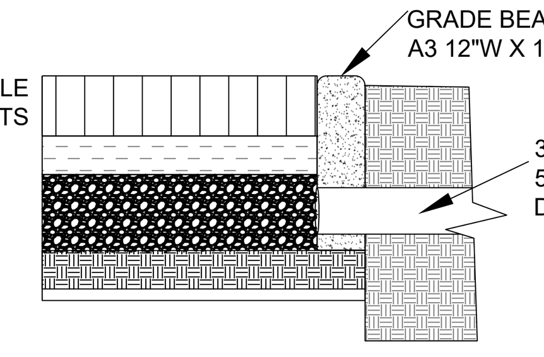
LIGHT DUTY/PARKING AREA PAVEMENT SECTION
for hatched area parking spaces
n.t.s.



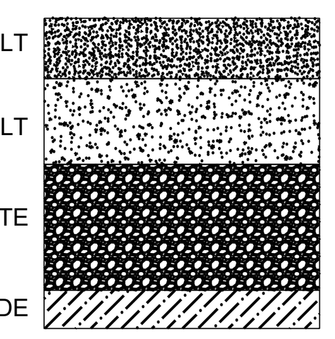
SIDEWALK SECTION
NOT TO SCALE

- LIGHT BROOM FINISH.
- PLAN FOR JOINTS AND EXPANSION JOINTS TO BE PROVIDED BY CONTRACTOR.

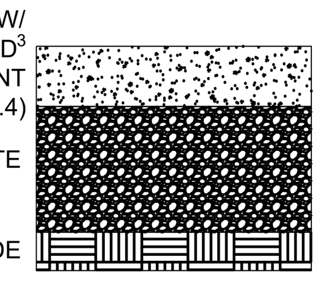
PAVER SECTION
for area near Route 11
n.t.s.



HEAVY DUTY PAVEMENT SECTION
n.t.s.



CONCRETE PAVEMENT SECTION
for area under and near dumpsters
n.t.s.

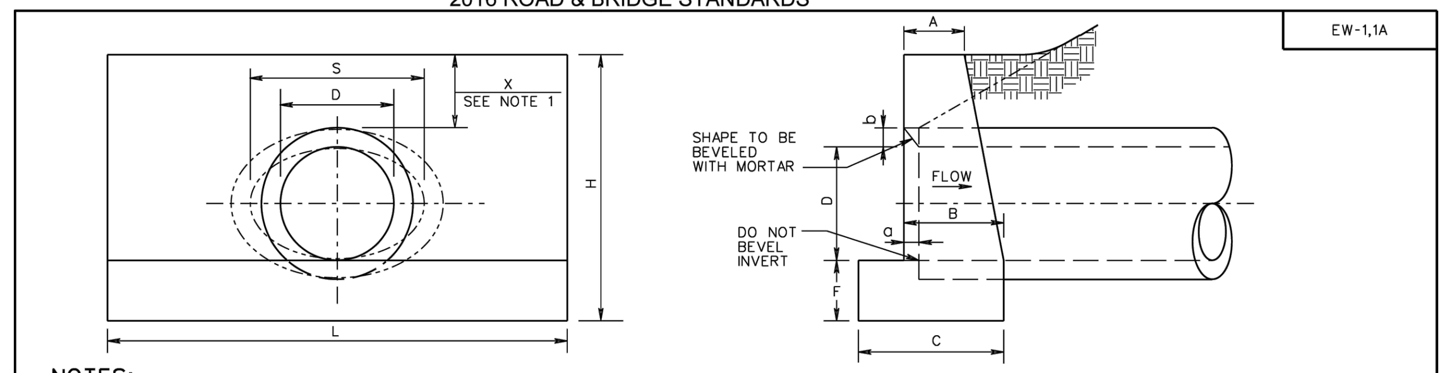


NOTE: DUMPSTER PAD TURN DOWN TO EXTEND 18" BELOW TOP OF SLAB, AND SHALL INCLUDE 1 GRADE 60 CONTINUOUS NO. 5 DEFORMED BAR TOP AND BOTTOM OF THE SECTION.

NOTES
1. JOINTS WHERE NEW PAVEMENT ABUTS EXISTING PAVEMENT SHALL BE SAW CUT TO PROVIDE A SMOOTH STRAIGHT EDGE. A 10' WIDE STRIP OF THE EXISTING PAVEMENT ADJACENT TO THE JOINT SHALL BE MILLED TO A DEPTH EQUAL TO THE THICKNESS OF THE SURFACE COURSE, AND THE NEW SURFACE COURSE SHALL EXTEND THROUGH THIS MILLED AREA.

2016 ROAD & BRIDGE STANDARDS

EW-1A



NOTES:
1. "H" MAY BE REDUCED UNTIL "X" REACHES A MINIMUM OF 4" WHERE ENDWALL WOULD PROTRUDE ABOVE SHOULDER LINE. IN NO CASE SHALL TOP OF ENDWALL PROJECT ABOVE FILL SLOPE, DITCH SLOPE, OR SHOULDER.
2. THIS ITEM MAY BE PRECAST OR CAST IN PLACE.
3. ALL CAST IN PLACE CONCRETE TO BE CLASS A3. FOR PRECAST SEE SHEET 101.02.
4. THIS STANDARD TO BE USED WITH STRAIGHT CROSSINGS AND ALL SKEWS(0° TO 45°).
5. HEADWALL TO BE BEVELED IN ALL AREAS EXCEPT WHERE A CONFLICT WITH INVERT.
6. BEVEL EDGE IS REQUIRED ON THE HEADWALL AT THE INLET END OF THE CULVERT (WHERE THE FLOW ENTERS THE CULVERT).
7. HEADWALL AT THE OUTLET END OF THE CULVERT MAY BE EITHER SQUARE EDGE OR BEVEL EDGE.
8. ON SHALLOW FILLS, WHERE ENDWALLS ARE 1' OR LESS BELOW SHOULDER LINE, THE TOP OF THE ENDWALL SHALL BE CONSTRUCTED PARALLEL TO THE GRADE OF THE ROAD.
9. ¾" CHAMFER MAY BE PROVIDED ON ALL EDGES AT MANUFACTURER'S OPTION.

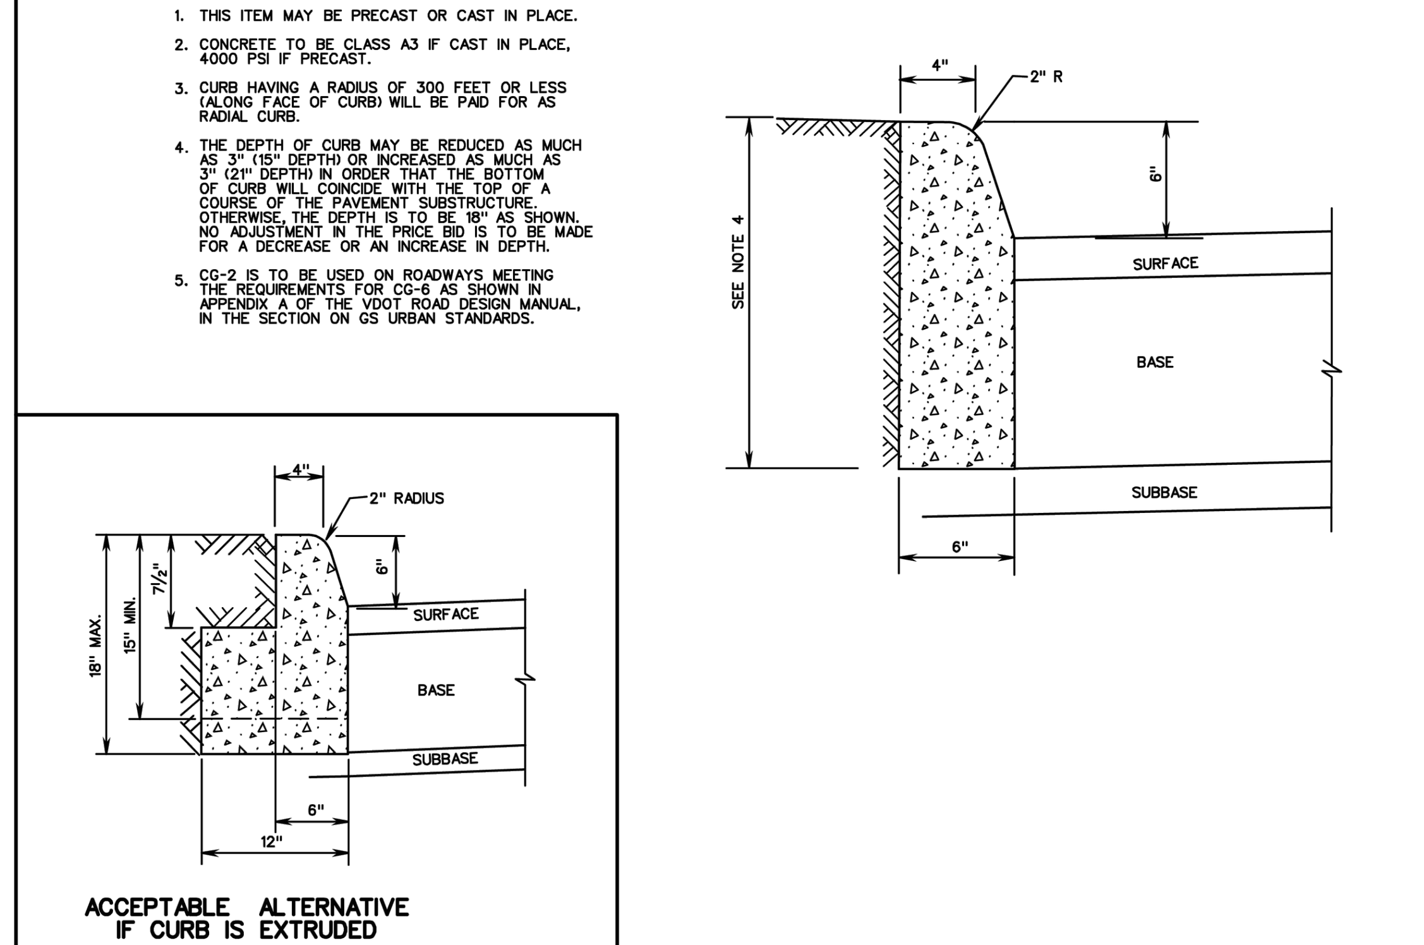
CG-2

NOTES:
1. THIS ITEM MAY BE PRECAST OR CAST IN PLACE.
2. CONCRETE TO BE CLASS A3 IF CAST IN PLACE, 4000 PSI IF PRECAST.
3. CURB HAVING A RADIUS OF 300 FEET OR LESS (ALONG FACE OF CURB) WILL BE PAID FOR AS RADIAL CURB.
4. THE DEPTH OF CURB MAY BE REDUCED AS MUCH AS 3" (15" DEPTH) OR INCREASED AS MUCH AS 3" (21" DEPTH) IN ORDER THAT THE BOTTOM OF CURB WILL COINCIDE WITH THE TOP OF A COURSE OF THE PAVEMENT SUBSTRUCTURE. OTHERWISE, THE DEPTH IS TO BE 18" AS SHOWN. NO ADJUSTMENT IN THE PRICE BID IS TO BE MADE FOR A DECREASE OR AN INCREASE IN DEPTH.
5. CG-2 IS TO BE USED ON ROADWAYS MEETING THE REQUIREMENTS FOR CG-6 AS SHOWN IN APPENDIX A OF THE VDOT ROAD DESIGN MANUAL, IN THE SECTION ON GS URBAN STANDARDS.



SPECIFICATION REFERENCE 105 502

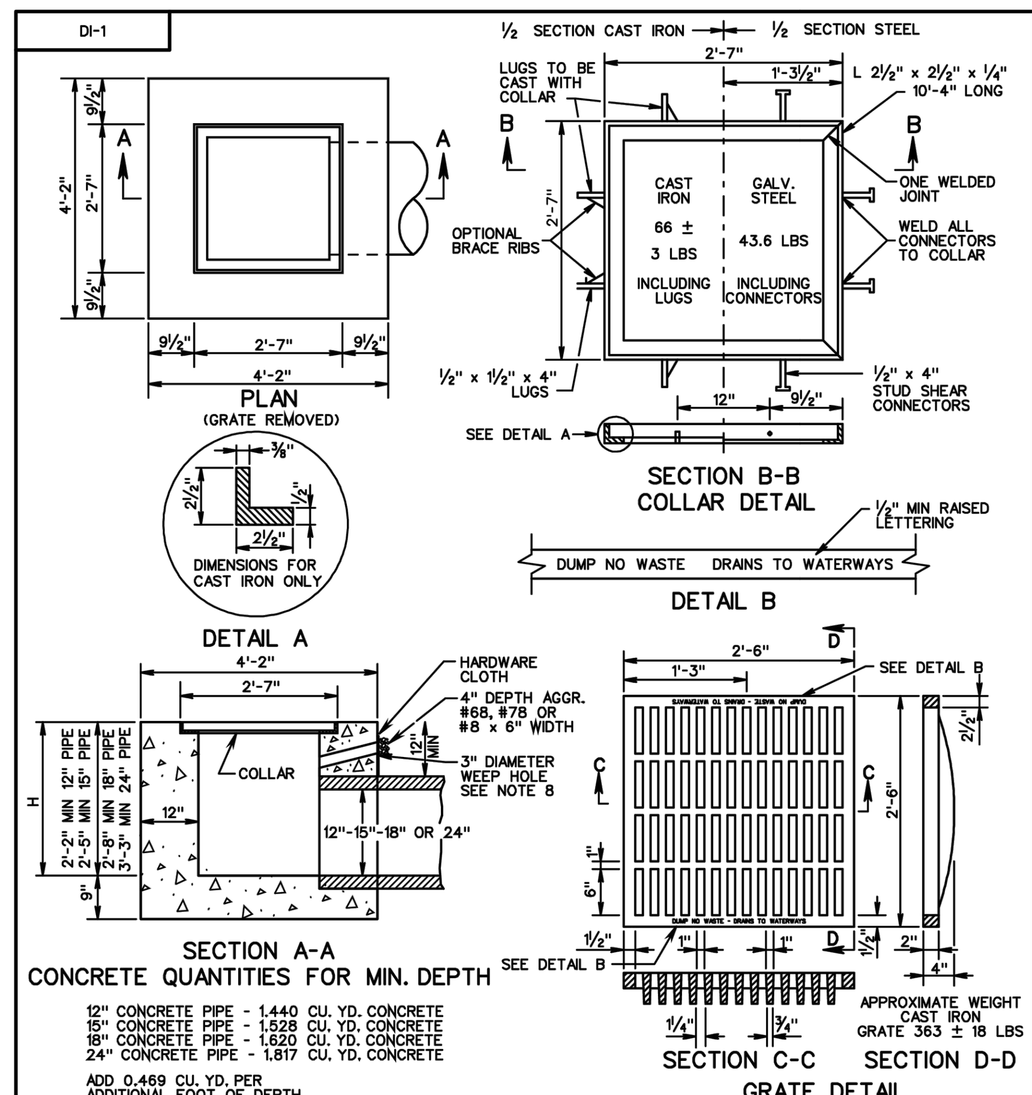
DI-1



NOTES
1. DEPTH OF INLET (H) TO BE SHOWN ON PLANS. FOR DEPTH GREATER THAN 10' USE STANDARD DI-1A
2. THE "H" DIMENSION SHOWN ON THE STANDARDS AND SPECIFIED ON THE PLANS WILL BE MEASURED FROM THE INVERT OF THE OUTFALL PIPE TO THE TOP OF THE STRUCTURE. PLAN "H" DIMENSIONS ARE APPROXIMATE ONLY FOR ESTIMATING PURPOSES AND THE ACTUAL DIMENSIONS SHALL BE DETERMINED BY THE CONTRACTOR FROM FIELD CONDITIONS.
3. WHEN SPECIFIED ON THE PLANS THE INVERT IS TO BE SHAPED IN ACCORDANCE WITH STANDARD IS-1. THE COST OF FURNISHING AND PLACING ALL MATERIALS INCIDENTAL TO THE SHAPING IS TO BE INCLUDED IN THE BID PRICE FOR THE STRUCTURE.
4. IN THE EVENT THE INVERT OF THE OUTFALL PIPE IS HIGHER THAN THE BOTTOM OF THE STRUCTURE, THE INVERT OF THE STRUCTURE SHALL BE SHAPED WITH CEMENT MORTAR TO PREVENT STANDING OR PONDING OF WATER IN THE STRUCTURE. THE COST OF FURNISHING AND PLACING ALL MATERIALS INCIDENTAL TO INLET SHAPING IS TO BE INCLUDED IN THE BID PRICE FOR THE STRUCTURE.
5. STEPS ARE TO BE PROVIDED WHEN H IS 4'-0" OR GREATER. FOR DETAILS SEE STANDARD ST-1.
6. THIS ITEM MAY BE PRECAST OR CAST-IN-PLACE.
7. #4 X 8" SMOOTH DOWELS AT APPROXIMATELY 12" C-C TO BE PLACED IN ALL AREAS ADJACENT TO ABUTTING CONCRETE TO PREVENT SETTLEMENT. IN LIEU OF DOWELS A 2"X4" NOTCH MAY BE PROVIDED. SEE STANDARD T-DI-3, 4 FOR ALTERNATE DESIGN.
8. 3" DIAMETER WEEP HOLE WITH 12"X12" PLASTIC HARDWARE CLOTH ¼" MESH OR GALVANIZED STEEL WIRE, MINIMUM WIRE DIAMETER 0.03", NUMBER 4 MESH HARDWARE CLOTH ANCHORED FIRMLY TO THE OUTSIDE OF THE STRUCTURE.
9. CAST IN PLACE CONCRETE IS TO BE CLASS A3 (3000 PSI). PRECAST CONCRETE IS TO BE 4000 PSI.
10. ANY ALTERNATE METHODS OF ANCHORAGE MEETING THE APPROVAL OF THE ENGINEER MAY BE SUBSTITUTED FOR THE CAST IRON LUGS AS SHOWN HEREON.
11. DUMP NO WASTE DRAINS TO WATERWAY LETTERING IS REQUIRED ON ALL DI-1 GRATES. LOCATION OF LETTERING MAY VARY BY MANUFACTURER.

IN THE EVENT THE INVERT OF THE OUTFALL PIPE IS HIGHER THAN THE BOTTOM OF THE STRUCTURE, THE INVERT OF THE STRUCTURE SHALL BE SHAPED WITH CEMENT MORTAR TO PREVENT STANDING OR PONDING OF WATER IN THE STRUCTURE. THE COST OF FURNISHING AND PLACING ALL MATERIALS INCIDENTAL TO THE SHAPING IS TO BE INCLUDED IN THE BID PRICE FOR THE STRUCTURE.
5. STEPS ARE TO BE PROVIDED WHEN H IS 4'-0" OR GREATER. FOR DETAILS SEE STANDARD ST-1.
6. THIS ITEM MAY BE PRECAST OR CAST-IN-PLACE.
7. #4 X 8" SMOOTH DOWELS AT APPROXIMATELY 12" C-C TO BE PLACED IN ALL AREAS ADJACENT TO ABUTTING CONCRETE TO PREVENT SETTLEMENT.
8. 3" DIAMETER WEEP HOLE TO BE LOCATED TO DRAIN SUBBASE MATERIAL. WEEP HOLE WITH 12"X12" PLASTIC HARDWARE CLOTH ¼" MESH OR GALVANIZED STEEL WIRE, MINIMUM WIRE DIAMETER 0.03", NUMBER 4 MESH HARDWARE CLOTH ANCHORED FIRMLY TO THE OUTSIDE OF THE STRUCTURE.
9. ALL REINFORCING STEEL SHALL HAVE A MIN. COVER OF 2".
10. ALL REINFORCING STEEL TO BE CUT CLEAR OF ALL OPENINGS BY 2".
11. CAST-IN PLACE CONCRETE IS TO BE CLASS A3 (3000 PSI). PRECAST CONCRETE IS TO BE 4000 PSI.
12. LENGTH OF SLOT (L) WILL, IN EVERY CASE, BE SHOWN ON PLANS.
13. IF INLET IS CONSTRUCTED IN MEDIAN CURB OR WITH INTEGRAL CURB, GUTTER IS TO BE OMITTED (SEE DETAIL).
14. STANDARD INLETS MAY BE CONSTRUCTED WITH CONCRETE BLOCKS IN ACCORDANCE WITH THE DETAILS SHOWN ON STANDARD DRAWING DI-MB.
15. THIS AREA MAY BE EARTHEN, IN WHICH CASE THE EXPANSION JOINTS WILL APPLY ONLY TO CURB AND GUTTER.
16. CONCRETE QUANTITIES SHOWN ARE FOR DEPTH (H) OF 5'-2" WITHOUT PIPES. THE AMOUNT DISPLACED BY PIPES MUST BE DEDUCTED TO OBTAIN TRUE QUANTITIES. FOR INLETS OF DIFFERENT DEPTHS ADD OR SUBTRACT 0.32 CUBIC YARDS OF CONCRETE FOR EACH FOOT OF DEPTH.
17. LENGTH OF ANGLE IRON AS SHOWN ON SHEET 1 OF 2 IS TO BE L +16" AT 4.10 LBS./FT..
18. ✳ DENOTES LENGTH OF ONE (1) BAR.
19. ALL REINFORCING BARS TO BE #5.
20. WHEN INLET IS USED IN 4'-0" MEDIAN, BACK OF INLET IS TO BE SHAPED TO CONFORM TO PROPOSED CURB.

SPECIFICATION REFERENCE 233 302

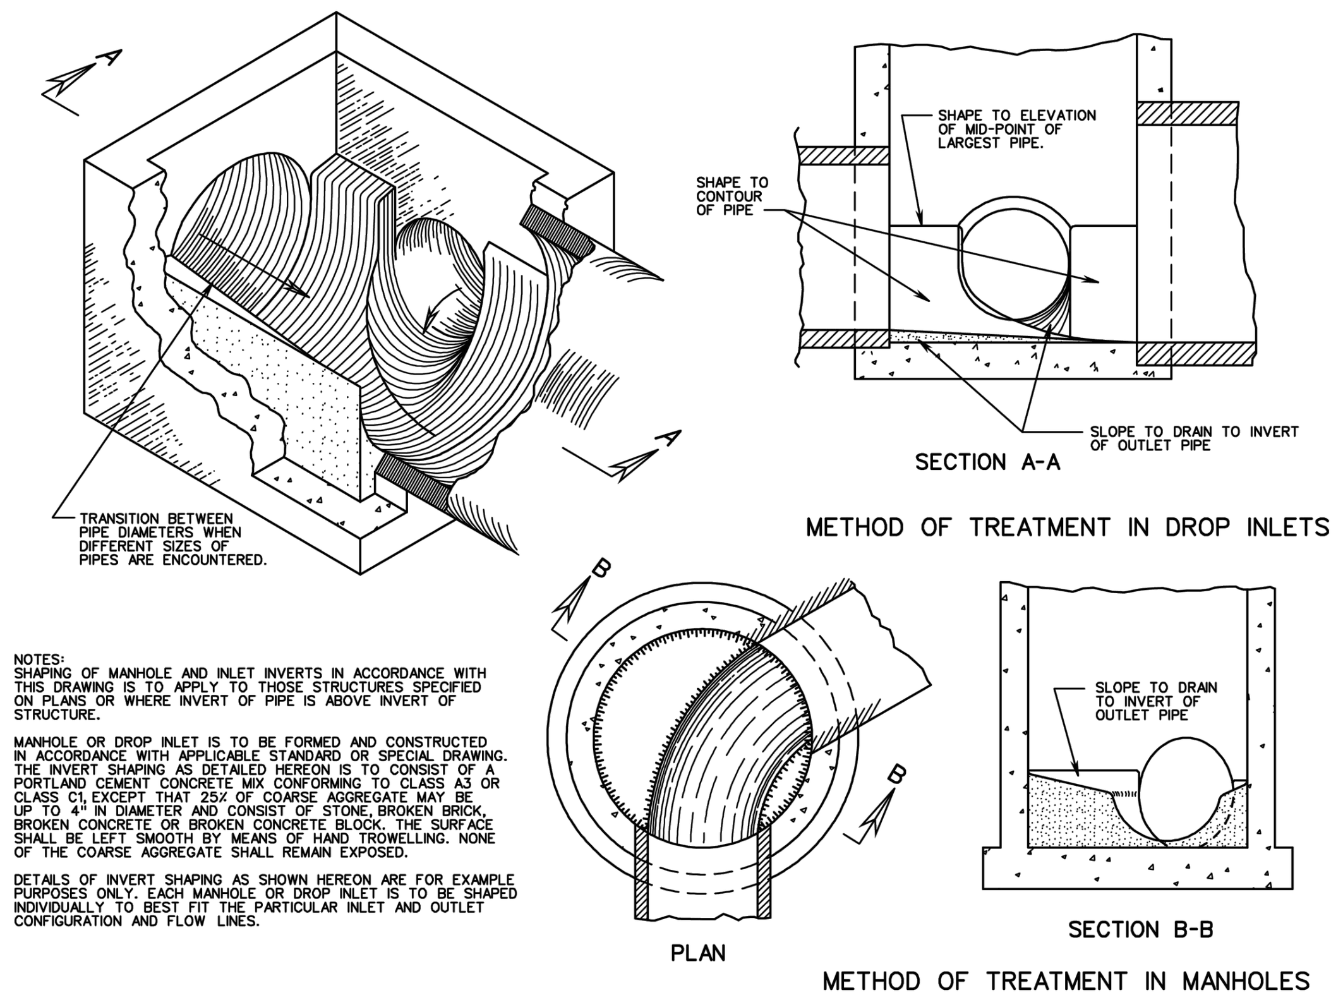
IS-1



NOTES:
SHAPING OF MANHOLE AND INLET INVERTS IN ACCORDANCE WITH THIS DRAWING IS TO APPLY TO THOSE STRUCTURES SPECIFIED ON PLANS OR WHERE INVERT OF PIPE IS ABOVE INVERT OF STRUCTURE.

MANHOLE OR DROP INLET IS TO BE FORMED AND CONSTRUCTED IN ACCORDANCE WITH APPLICABLE STANDARD OR SPECIAL DRAWING. THE INVERT SHAPING AS DETAILED HEREON IS TO CONSIST OF A PORTLAND CEMENT CONCRETE MIX CONFORMING TO CLASS A3 OR CLASS C1, EXCEPT THAT 25% OF COARSE AGGREGATE MAY BE UP TO 4" IN DIAMETER AND CONSIST OF STONE, BROKEN BRICK, BROKEN CONCRETE OR BROKEN CONCRETE BLOCK. THE SURFACE SHALL BE LEFT SMOOTH BY MEANS OF HAND TROWELLING. NONE OF THE COARSE AGGREGATE SHALL REMAIN EXPOSED.

DETAILS OF INVERT SHAPING AS SHOWN HEREON ARE FOR EXAMPLE PURPOSES ONLY. EACH MANHOLE OR DROP INLET IS TO BE SHAPED INDIVIDUALLY TO BEST FIT THE PARTICULAR INLET AND OUTLET CONFIGURATION AND FLOW LINES.

VDOT ROAD AND BRIDGE STANDARDS | SHEET 1 OF 1 | 106.08 | REVISION DATE

STANDARD METHOD OF SHAPING MANHOLE & INLET INVERTS
VIRGINIA DEPARTMENT OF TRANSPORTATION

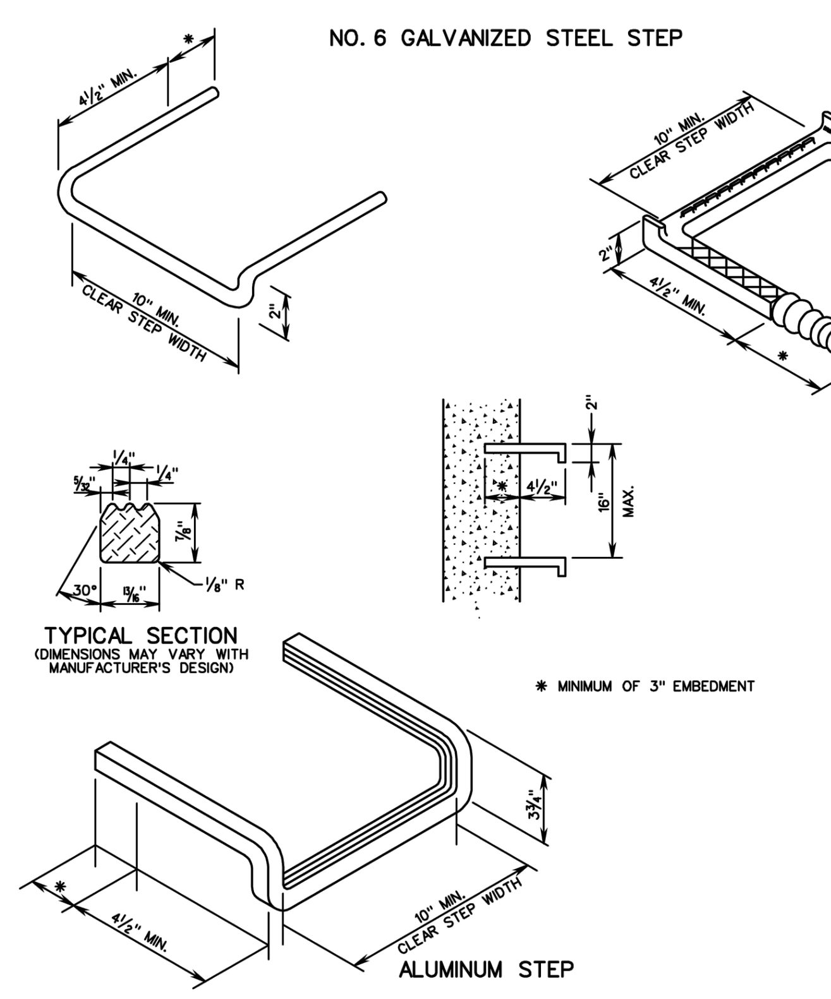
2016 ROAD & BRIDGE STANDARDS

2016 ROAD & BRIDGE STANDARDS

ST-1



NOTES:
STEPS WILL BE REQUIRED IN ALL STRUCTURES WITH A DEPTH OF 4'-0" OR GREATER UNLESS OTHERWISE NOTED ON THE PLANS.

ALL STEPS SHALL PROTRUDE 4½" FROM INSIDE FACE OF STRUCTURE WALL.

MAXIMUM STEP SPACING TO BE 16" C-C.

STEPS SHALL WITHSTAND A MINIMUM FORCE OF 300 POUNDS WHEN EXTENDED 4½" FROM THE FACE OF THE SUPPORT.

STEPS ARE TO BE VERTICALLY ALIGNED AND UNIFORMALY SPACED FOR THE ENTIRE DEPTH OF ANY STRUCTURE.

IN PRECAST UNITS STEPS MAY BE CAST IN PLACE, MORTARED INTO HOLES PROVIDED BY THE FABRICATOR, OR DRIVEN.

STEPS DIFFERING IN DIMENSIONS, CONFIGURATION, OR MATERIALS FROM THOSE SHOWN MAY ALSO BE USED PROVIDED THEY MEET THE MINIMUM REQUIREMENTS SHOWN HEREON AND THE CONTRACTOR HAS FURNISHED THE ENGINEER WITH DETAILS AND CERTIFIED TEST REPORTS OF THE PROPOSED SUBSTITUTE AND HAS RECEIVED WRITTEN APPROVAL FROM THE ENGINEER FOR THE USE OF SUCH STEPS.

ALL STEPS INSTALLED SHALL BE PROVIDED WITH SLIP-RESISTANT SURFACES SUCH AS BUT NOT LIMITED TO, CORRUGATED KNURLED, OR DIMPLED SURFACES.

ALUMINUM STEPS SHALL BE FABRICATED IN ACCORDANCE WITH ASTM B221, ALLOY 6005-T5.
THAT PORTION OF THE STEP ENCASED IN MASONRY SHALL BE UNIFORMLY COATED WITH A BITUMIMOUS, SOLVENT TYPE, ASBESTOS FILLED ALUMINUM PIGMENTED COATING CONFORMING TO FEDERAL SPECIFICATION TC-C-00498A.

NOTES:

1. COVER HEIGHTS INDICATED IN TABLES ARE FOR FINISHED CONSTRUCTION, USING AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS.
2. TO PROTECT PIPE DURING CONSTRUCTION, MINIMUM HEIGHT OF COVER TO BE IN ACCORDANCE WITH TABLE A PRIOR TO ALLOWING CONSTRUCTION TRAFFIC TO CROSS INSTALLATION. THE COVER SHALL EXTEND THE FULL LENGTH OF THE PIPE. THE APPROACH FILL IS TO EXTEND A MINIMUM OF 10(DIAMETER + ½ DIAMETER) ON EACH SIDE OF THE PIPE OR TO THE INTERSECTION WITH A CUT.
3. STANDARD MINIMUM FINISHED HEIGHT OF COVER FOR ALL PIPES, EXCEPT THOSE UNDER ENTRANCES, SHALL BE 2.0' OR ½ DIAMETER WHICHEVER IS GREATER. FOR 12" THROUGH 48" DIAMETER PIPE INSTALLATIONS WHERE THE COVER HEIGHTS CANNOT BE ACHIEVED, AN ABSOLUTE MINIMUM FINISHED COVER HEIGHT OF 1.0' WILL BE ALLOWED ONLY IF ALL POSSIBLE MEANS TO OBTAIN THE STANDARD VALUE HAVE BEEN EXHAUSTED. THE MINIMUM FINISHED HEIGHT OF COVER FOR PIPES UNDER ENTRANCES IS 9" FOR PIPE DIAMETERS LESS THAN OR EQUAL TO 24", AND 12" FOR PIPE DIAMETERS GREATER THAN 24". WHERE THE SURFACE OVER THE TOP OF THE PIPE WILL BE ASPHALT, A MINIMUM OF 6" OF CLASS I BACKFILL MATERIAL IS TO BE PLACED BETWEEN THE TOP OF THE PIPE AND THE BOTTOM OF THE ASPHALT.
4. SEE STANDARD PB-1 FOR PIPE BEDDING AND BACKFILL REQUIREMENTS.
5. LARGE CULVERTS SHALL BE DESIGNED BY AN ENGINEER, REGISTERED IN THE COMMONWEALTH OF VIRGINIA, AND SHALL BE DESIGNED IN ACCORDANCE WITH THE REQUIREMENTS OF VOLUME V, PART 2 OF THE MANUAL OF THE STRUCTURE AND BRIDGE DIVISION. A LARGE CULVERT IS ANY CULVERT THAT WILL BECOME PART OF THE STRUCTURE AND BRIDGE INVENTORY. THE GEOMETRIC DEFINITION OF THESE STRUCTURES IS PROVIDED IN THE CURRENT VERSION OF VDOT'S IIM-S&B-27.

PIPE TYPE DEFINITIONS:
TYPE C - SINGLE WALL PIPE (CORRUGATED WALL ONLY)
TYPE S - DOUBLE WALL PIPE (CORRUGATED WALL WITH SMOOTH INNER WALL)
TYPE D - TRIPLE WALL PIPE (CORRUGATED WALL BETWEEN SMOOTH INNER AND OUTER WALL)

FREDERICK WATER

Construction Notes

1. Frederick Water's Water and Sewer Standards and Specifications are available at www.frederickwater.com
2. The contractor shall adhere to Frederick Water standards and specifications in effect at the time of construction.
3. The contractor shall schedule a pre-construction meeting with the Frederick Water Inspector prior to commencing installation of any water or sewer facilities. Contractor shall also arrange for inspection of said facilities by Frederick Water. Oil water separators and/or grease traps may be required by Frederick County Building Inspections. Both Frederick County Building Inspections and Frederick Water will inspect the installation of those facilities. Both inspections shall be scheduled by Contractor.
4. The contractor shall connect a new sewer line to an existing manhole by core drilling the manhole.
5. A new water (or forced sewer) main shall be connected to an existing main by a a cut-in tee with accompanying valves.
6. Exact locations of water and sewer services on new lines are to be coordinated with Frederick Water's Inspector.
   a. Adjust Frederick Water facilities to grade as required by the Frederick Water Inspector.
7. Frederick Water's maintenance division shall furnish and install all water meters through 2 inch in size. It is the contractor's responsibility to have the meter box assembly installed correctly. Before a permanent meter is installed:
   a. The meter box, with its frame and cover, must be properly aligned with the yoke bar.
   b. The frame and cover shall be set to final grade.
   c. The distance between the top of the cover and the yoke bar shall be between 20 and 23 inches.
   d. All components of the meter box assembly shall be in proper working order.
8. For services that connect to existing lines:
   a. Frederick Water shall furnish and install:
      i. all ¾"x¾", ¾", 1", 1½" and 2" water services
      ii. all sewer services.
   b. The owner/developer shall:
      i. coordinate (or have the contractor coordinate) the location of the service lateral with Frederick Water's engineering assistant.
      ii. submit an Application for Service and pay the required fees.
9. All water service lines must have a backflow prevention assembly (double check valve or RPZ, as required). The assembly must meet ASSE standard number 1015 or 1013.
10. All fire lines must have a backflow prevention assembly (detector double check valve or RPZ, as required). The assembly shall meet ASSE standard number 1048 or 1047. Any privately owned fire line, interior or exterior, shall also have a fire service meter. This assembly shall be installed immediately before the backflow prevention unit. Radio read remotes are required.
11. Frederick Water shall review the mechanical plan(s) for design and material approval of a building's:
    a. domestic water meter and its backflow prevention device, and/or its
    b. Fire service line's water meter and backflow prevention device.
12. DEQ must also approve sewer pump stations. Frederick Water requires a copy of DEQ's Certificate to Operate and a copy of the station's DEQ approved O&M manual. These documents must be received before substantial completion is issued and water meters released.

Erosion and Sediment Control Narrative

Project Description
This project consists of remodeling and expanding the Honda auto dealership and supporting site features. 4.5 acres of land will be disturbed with the construction of this project.

Date of Construction
Construction is planned to begin the 3rd quarter of 2023 and end in the 3rd quarter of 2024.

Existing Site Conditions
The site is currently a Honda car dealership store.

Adjacent Property
The project is located in the Kernstown area of Frederick County south of Route 37, and between I-81 and Route 11.

Offsite Areas
There are no planned off-site borrow or disposal areas associated with this project.

Soils
For the project area, generalized soils data contained on the USDA Natural Resource Conservation Service's Web Soil Survey shows the project area with 34% Carbo-Oaklet silt loam with 2-15% slopes, 22.2% Chilhowie silty clay loam with 7 to 15% slopes, and 43.9% Oaklet silt loam, 2 to 7% slopes.

Geology
No rock outcrops or karst features were observed.

Critical Erosion Areas
Areas where concentrated stormwater is discharging will be critical.

Erosion and Sediment Control Measures
Unless otherwise indicated, all vegetative and structural erosion and sediment control practices shall be constructed and maintained according to minimum standards and specifications of the Virginia Erosion and Sediment Control Handbook. The minimum standards of the handbook shall be adhered to unless otherwise waived or approved by a variance.

CONSTRUCTION NARRATIVE
The work shall generally be carried out in the following sequence:

PHASE 1
1. Hold pre-construction meeting on-site with the inspector. The Frederick County inspector shall have 48 hours notice to schedule an on-site pre-construction inspection following the issuance of a land disturbance permit. The certified responsible land disturber must attend the pre-construction meeting
2. Install the construction entrance. Temporary Construction Entrance (3.02) installed at the entrance to the site to minimize mud carried onto the roadway.
3. Clearing and grubbing for sediment control and sediment trapping devices only. Silt Fence Barrier (3.05) or temporary diversion dikes (3.09) are to be installed down-slope of work areas and around the on-site stockpile area to filter sediment-laden runoff from sheet flow as indicated on the plans.
4. Construct and/or place sediment trapping and sediment control devices.

PHASE 2
1. Clear and grub the remainder of the site. Topsoil that is to be used in the final grading of grassed areas shall be stripped and stockpiled on site for later use. The excess topsoil shall be removed and disposed of by the contractor. All stockpiles shall be stabilized with seeding and surrounded with silt fence.
2. Rough grade the site.
3. Storm drain structures and pipe shall be installed. Inlet protection (3.07) shall be installed as shown on the plans around inlets to filter sediment-laden runoff. The area shall be stabilized upon completion of grading.
5. Final grading.
6. Top Soiling (3.30) and Surface Roughening (3.29) shall be applied to all areas that will be seeded.
7. Permanent Seeding (3.32) shall be applied as soon as the grading operations are completed.
8. Remove erosion and sediment control measures within 30 days from when they are no longer needed and with approval of the inspector.

Vegetative Practices
Temporary seeding (3.31) soil stabilization shall be applied to denuded areas within seven days after the final grading is complete on any portion of the site. Temporary soil stabilization shall be applied within seven days to denuded areas that may not be at final grade but will remain dormant for longer than 30 days, but less than one year. Permanent stabilization shall be applied to areas that are to be left dormant for more than one year.

Stockpile areas shall be surrounded with silt fence and protected by mulch and/or temporary seeding immediately after grading.
Diversion dike and temporary sediment trap embankments shall be compacted by machine, seeded and mulched (hay mulch or straw) for temporary and/or permanent vegetative cover immediately after construction.

Vegetative stabilization shall be uniform, mature enough to survive, and adequate to inhibit erosion. Any areas not meeting these requirements shall be reseeded.

Management Practices
Construction will be carried out so that grading operations can begin and end as quickly as possible.
Sediment trapping measures will be installed as the first step in grading. These measures will be seeded and mulched immediately following installation.

Temporary seeding or other stabilization will follow immediately after grading. Areas which are not to be disturbed will be clearly marked by flags, signs, etc. The job superintendent shall be responsible for the installation and maintenance of all erosion and sediment control practices. Maintenance of these measures throughout the project is critical to the effectiveness of the program. Devices listed herein are considered to be minimum erosion and sediment controls. Addition E&S measures may be necessary due to contractor phasing or other unforeseen conditions. It is the contractor's responsibility to provide measures in addition to those shown in order to control erosion and contain sediment on the site. All measures shall be installed in accordance with the Virginia Erosion and Sediment Control Handbook. After achieving adequate stabilization, the temporary E&S controls will be cleaned up and removed.

Permanent Stabilization
All areas disturbed by construction shall be stabilized with permanent seeding immediately following finish grading. Seeding shall be done with Kentucky 31 Tall Fescue according to Std. & Spec. 3.32, PERMANENT SEEDING, of the handbook. Mulch (straw or fiber) will be installed over fill slopes which have been brought to final grade and have been seeded to protect the slopes from hill and gully erosion and to allow the seed to germinate properly will be used on relatively flat areas. In all seeding operations, seed, fertilizer, and lime will be applied before mulching.

STORMWATER MANAGEMENT
This project does not increase the impervious area of the site. The existing on-site stormwater management system will be used to manage stormwater runoff.

MAINTENANCE
In general, all erosion and sediment control measures will be checked daily and after each rainfall event. The following items are to be checked:
1. The gravel construction entrance shall be checked regularly for sediment buildup which will prevent drainage. If the gravel is clogged by sediment, it shall be removed and cleaned or replaced.
2. The silt fence shall be checked after each storm event. Silt shall be cleaned out and repairs made when needed.
3. The seeded areas will be checked regularly to ensure that a good stand is maintained. Areas should be fertilized and reseeded as needed.
4. The contractor shall be responsible for keeping all roads and travel ways, both public and private, clean of all dust and mud at all times.
5. All downstream properties and waterways shall be provided adequate protection from erosion and sediment deposition.

SEEDING SCHEDULE
1. All permanent seeding shall be in accordance with section 3.32 of the VESCH.
2. On non-rock surfaces, spread topsoil at a minimum depth of four inches.
3. Incorporate pulverized agricultural lime into the soil at a rate of 92 lbs. per 1000 sq. ft. (2 tons per acre).
4. Fertilize with 10-10-10 fertilizer at a rate of 23 lbs. per 1000 sq. ft. (1000 lbs. per acre).
5. Seed all areas with a seed mix consisting of 67% Kentucky 31 Tall Fescue and 33% Red Top Clover.
6. Mulch all seeded areas with straw mulch applied at a rate of 3,500 lbs. per acre anchored with cutback or emulsified asphalt applied at a rate of 200 gallons per acre.

DUST CONTROL
1. Temporary seeding shall be applied to all disturbed areas subject to little or no construction traffic.
2. All haul roads and other heavy traffic routes shall be sprinkled with water until the surface is wet. This process shall be repeated as needed to control dust.

MINIMUM CONSTRUCTION EROSION & SEDIMENT CONTROL STANDARDS
9VAC25-840-40. Minimum standards.

A VESCP must be consistent with the following criteria, techniques and methods:

1. Permanent or temporary soil stabilization shall be applied to denuded areas within seven days after final grade is reached on any portion of the site. Temporary soil stabilization shall be applied within seven days to denuded areas that may not be at final grade but will remain dormant for longer than 14 days. Permanent stabilization shall be applied to areas that are to be left dormant for more than one year.

2. During construction of the project, soil stock piles and borrow areas shall be stabilized or protected with sediment trapping measures. The applicant is responsible for the temporary protection and permanent stabilization of all soil stockpiles on site as well as borrow areas and soil intentionally transported from the project site.

3. A permanent vegetative cover shall be established on denuded areas not otherwise permanently stabilized. Permanent vegetation shall not be considered established until a ground cover is achieved that is uniform, mature enough to survive and will inhibit erosion.

4. Sediment basins and traps, perimeter dikes, sediment barriers and other measures intended to trap sediment shall be constructed as a first step in any land-disturbing activity and shall be made functional before upslope land disturbance takes place.

5. Stabilization measures shall be applied to earthen structures such as dams, dikes and diversions immediately after installation.

6. Sediment traps and sediment basins shall be designed and constructed based upon the total drainage area to be served by the trap or basin.

a. The minimum storage capacity of a sediment trap shall be 134 cubic yards per acre of drainage area and the trap shall only control drainage areas less than three acres.

b. Surface runoff from disturbed areas that is comprised of flow from drainage areas greater than or equal to three acres shall be controlled by a sediment basin. The minimum storage capacity of a sediment basin shall be 134 cubic yards per acre of drainage area. The outfall system shall, at a minimum, maintain the structural integrity of the basin during a 25-year storm of 24-hour duration. Runoff coefficients used in runoff calculations shall correspond to a bare earth condition or those conditions expected to exist while the sediment basin is utilized.

7. Cut and fill slopes shall be designed and constructed in a manner that will minimize erosion. Slopes that are found to be eroding excessively within one year of permanent stabilization shall be provided with additional slope stabilizing measures until the problem is corrected.

8. Concentrated runoff shall not flow down cut or fill slopes unless contained within an adequate temporary or permanent channel, flume or slope drain structure.

9. Whenever water seeps from a slope face, adequate drainage or other protection shall be provided.

10. All storm sewer inlets that are made operable during construction shall be protected so that sediment-laden water cannot enter the conveyance system without first being filtered or otherwise treated to remove sediment.

11. Before newly constructed stormwater conveyance channels or pipes are made operational, adequate outlet protection and any required temporary or permanent channel lining shall be installed in both the conveyance channel and receiving channel.

12. When work in a live watercourse is performed, precautions shall be taken to minimize encroachment, control sediment transport and stabilize the work area to the greatest extent possible during construction. Nonerodible material shall be used for the construction of causeways and cofferdams. Earthen fill may be used for these structures if armored by nonerodible cover materials.

13. When a live watercourse must be crossed by construction vehicles more than twice in any six-month period, a temporary vehicular stream crossing constructed of nonerodible material shall be provided.

14. All applicable federal, state and local requirements pertaining to working in or crossing live watercourses shall be met.

15. The bed and banks of a watercourse shall be stabilized immediately after work in the watercourse is completed.

16. Underground utility lines shall be installed in accordance with the following standards in addition to other applicable criteria:

a. No more than 500 linear feet of trench may be opened at one time.

b. Excavated material shall be placed on the uphill side of trenches.

c. Effluent from dewatering operations shall be filtered or passed through an approved sediment trapping device, or both, and discharged in a manner that does not adversely affect flowing streams or off-site property.

d. Material used for backfilling trenches shall be properly compacted in order to minimize erosion and promote stabilization.

e. Restabilization shall be accomplished in accordance with this chapter.

f. Applicable safety requirements shall be complied with.

17. Where construction vehicle access routes intersect paved or public roads, provisions shall be made to minimize the transport of sediment by vehicular tracking onto the paved surface. Where sediment is transported onto a paved or public road surface, the road surface shall be cleaned thoroughly at the end of each day. Sediment shall be removed from the roads by shoveling or sweeping and transported to a sediment control disposal area. Street washing shall be allowed only after sediment is removed in this manner. This provision shall apply to individual development lots as well as to larger land-disturbing activities.

18. All temporary erosion and sediment control measures shall be removed within 30 days after final site stabilization or after the temporary measures are no longer needed, unless otherwise authorized by the VESCP authority. Trapped sediment and the disturbed soil areas resulting from the disposition of temporary measures shall be permanently stabilized to prevent further erosion and sedimentation.

19. Properties and waterways downstream from development sites shall be protected from sediment deposition, erosion and damage due to increases in volume, velocity and peak flow rate of stormwater runoff for the stated frequency storm of 24-hour duration in accordance with the following standards and criteria. Stream restoration and relocation projects that incorporate natural channel design concepts are not man-made channels and shall be exempt from any flow rate capacity and velocity requirements for natural or man-made channels:

a. Concentrated stormwater runoff leaving a development site shall be discharged directly into an adequate natural or man-made receiving channel, pipe or storm sewer system. For those sites where runoff is discharged into a pipe or pipe system, downstream stability analyses at the outfall of the pipe or pipe system shall be performed.

b. Adequacy of all channels and pipes shall be verified in the following manner:

(1) The applicant shall demonstrate that the total drainage area to the point of analysis within the channel is one hundred times greater than the contributing drainage area of the project in question; or

(2)(a) Natural channels shall be analyzed by the use of a two-year storm to verify that stormwater will not overtop channel banks nor cause erosion of channel bed or banks.

(a)All previously constructed man-made channels shall be analyzed by the use of a ten-year storm to verify that stormwater will not overtop its banks and by the use of a two-year storm to demonstrate that stormwater will not cause erosion of channel bed or banks; and

(b) Pipes and storm sewer systems shall be analyzed by the use of a ten-year storm to verify that stormwater will be contained within the pipe or system.

c. If existing natural receiving channels or previously constructed man-made channels or pipes are not adequate, the applicant shall:

(1) Improve the channels to a condition where a ten-year storm will not overtop the banks and a two-year storm will not cause erosion to channel the bed or banks; or

(2) Improve the pipe or pipe system to a condition where the ten-year storm is contained within the appurtenances;

(3) Develop a site design that will not cause the pre-development peak runoff rate from a two- year storm to increase when runoff outfalls into a natural channel or will not cause the pre- development peak runoff rate from a ten-year storm to increase when runoff outfalls into a man- made channel; or provide a combination of channel improvement, stormwater detention or other measures which is satisfactory to the VESCP authority to prevent downstream erosion.

d. The applicant shall provide evidence of permission to make the improvements.

e. All hydrologic analyses shall be based on the existing watershed characteristics and the ultimate development condition of the subject project.

f. If the applicant chooses an option that includes stormwater detention, he shall obtain approval from the VESCP of a plan for maintenance of the detention facilities. The plan shall set forth the maintenance requirements of the facility and the person responsible for performing the maintenance.

g. Outfall from a detention facility shall be discharged to a receiving channel, and energy dissipators shall be placed at the outfall of all detention facilities as necessary to provide a stabilized transition from the facility to the receiving channel.

h. All on-site channels must be verified to be adequate.

i. Increased volumes of sheet flows that may cause erosion or sedimentation on adjacent property shall be diverted to a stable outlet, adequate channel, pipe or pipe system, or to a detention facility.

j. In applying these stormwater management criteria, individual lots or parcels in a residential, commercial or industrial development shall not be considered to be separate development projects. Instead, the development, as a whole, shall be considered to be a single development project. Hydrologic parameters that reflect the ultimate development condition shall be used in all engineering calculations.

k. All measures used to protect properties and waterways shall be employed in a manner which minimizes impacts on the physical, chemical and biological integrity of rivers, streams and other waters of the state.

Any plan approved prior to July 1, 2014, that provides for stormwater management that addresses any flow rate capacity and velocity requirements for natural or man-made channels shall satisfy the flow rate capacity and velocity requirements for natural or man-made channels if the practices are designed to (i) detain the water quality volume and to release it over 48 hours; (ii) detain and release over a 24-hour period the expected rainfall resulting from the one year, 24- hour storm; and (iii) reduce the allowable peak flow rate resulting from the 1.5, 2, and 10-year, 24-hour storms to a level that is less than or equal to the peak flow rate from the site assuming it was in a good forested condition, achieved through multiplication of the forested peak flow rate by a reduction factor that is equal to the runoff volume from the site when it was in a good forested condition divided by the runoff volume from the site in its proposed condition, and shall be exempt from any flow rate capacity and velocity requirements for natural or man-made channels as defined in any regulations promulgated pursuant to § 62.1-44.15:54 or 62.1- 44.15:65 of the Act.

l. For plans approved on and after July 1, 2014, the flow rate capacity and velocity requirements of § 62.1-44.15:52 A of the Act and this subsection shall be satisfied by compliance with water quantity requirements in the Stormwater Management Act (§62.1-44.15:24 et seq. of the Code of Virginia) and attendant regulations, unless such land-disturbing activities are in accordance with 9VAC25-870-48 of the Virginia Stormwater Management Program (VSMP) Permit Regulations.

m. Compliance with the water quantity minimum standards set out in 9VAC25-870-66 of the Virginia Stormwater Management Program (VSMP) Permit Regulations shall be deemed to satisfy the requirements of Minimum Standard 19.

TEMPORARY SEDIMENT BASIN DESIGN DATA SHEET

(with or without an emergency spillway)

Project CMA Honda

Basin # 1 Location east side of side

Total area draining to basin: 4 acres.

Basin Volume Design

Wet Storage:

1. Minimum required volume = 67 cu. yds. x Total Drainage Area (acres).
   67 cu. yds. x 4 acres = 268 cu. yds.
2. Available basin volume = 317 cu. yds. at elevation 722. (From storage - elevation curve)
3. Excavate 0 cu. yds. to obtain required volume*.
   * Elevation corresponding to required volume = invert of the dewatering orifice.
4. Available volume before cleanout required.
   33 cu. yds. x 4 acres = 132 cu. yds.
5. Elevation corresponding to cleanout level = 721.
   (From Storage - Elevation Curve)
6. Distance from invert of the dewatering orifice to cleanout level = 1 ft. (Min. = 1.0 ft.)

Dry Storage:

7. Minimum required volume = 67 cu. yds. x Total Drainage Area (acres).
   67 cu. yds. x 4 acres = 268 cu. yds.

8. Total available basin volume at crest of riser* = 741 cu. yds. at elevation 724. (From Storage - Elevation Curve)
   * Minimum = 134 cu. yds./acre of total drainage area.
9. Diameter of dewatering orifice = 4 in.
10. Diameter of flexible tubing = 26 in. (diameter of dewatering orifice plus 2 inches).

Preliminary Design Elevations

11. Crest of Riser = 722
    Top of Dam = 725
    Design High Water = 722
    Upstream Toe of Dam = 720

Basin Shape

12. Length of Flow / Effective Width L / We = 0.5
    If > 2, baffles are not required
    If < 2, baffles are required yes

Runoff

13. Q_2 = 9.2 cfs (From Chapter 5)
14. Q_{25} = 27.6 cfs (From Chapter 5)

Principal Spillway Design

15. With emergency spillway, required spillway capacity $Q_p = Q_2$ = 9.2 cfs. (riser and barrel)
    Without emergency spillway, required spillway capacity $Q_p = Q_{25}$ = 18.4 cfs. (riser and barrel)

16. With emergency spillway:
    Assumed available head (h) = 1 ft. (Using Q_2)
    h = Crest of Emergency Spillway Elevation - Crest of Riser Elevation
    Without emergency spillway:
    Assumed available head (h) = ft. (Using Q_{25})
    h = Design High Water Elevation - Crest of Riser Elevation
17. Riser diameter (D_r) = 72 in. Actual head (h) = 2 ft.
    (From Plate 3.14-8.)
    Note: Avoid orifice flow conditions.
18. Barrel length (l) = 60 ft.
    Head (H) on barrel through embankment = 4 ft.
    (From Plate 3.14-7).
19. Barrel diameter = 24 in.
    (From Plate 3.14-B [concrete pipe] or Plate 3.14-A [corrugated pipe]).
20. Trash rack and anti-vortex device
    Diameter = 102 inches.
    Height = 36 inches.
    (From Table 3.14-D).

Emergency Spillway Design

21. Required spillway capacity $Q_e = Q_{25} - Q_p$ = 18.4 cfs.
22. Bottom width (b) = 15 ft.; the slope of the exit channel (s) = 0.01 ft./foot; and the minimum length of the exit channel (x) = 20 ft.
    (From Table 3.14-C).

Anti-Seep Collar Design

23. Depth of water at principal spillway crest (Y) = 1 ft.
    Slope of upstream face of embankment (Z) = 3 :1.
    Slope of principal spillway barrel (S_b) = 0.5 %
    Length of barrel in saturated zone (L_s) = 35 ft.
24. Number of collars required = 1 dimensions = 5'x5'
    (from Plate 3.14-12).

Final Design Elevations

25. Top of Dam = 724
    Design High Water = 722
    Emergency Spillway Crest = 723
    Principal Spillway Crest = 722
    Dewatering Orifice Invert = 721
    Cleanout Elevation = 721
    Elevation of Upstream Toe of Dam or Excavated Bottom of "Wet Storage Area" (if excavation was performed) = 720

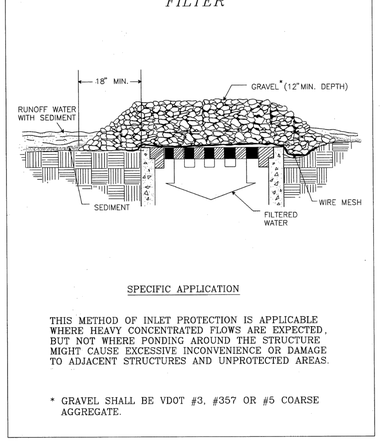
GRAVEL AND WIRE MESH DROP INLET SEDIMENT FILTER



SPECIFIC APPLICATION

THIS METHOD OF INLET PROTECTION IS APPLICABLE WHERE HEAVY CONCENTRATED FLOWS ARE EXPECTED, BUT NOT WHERE PONDING AROUND THE STRUCTURE MIGHT CAUSE EXCESSIVE INCONVENIENCE OR DAMAGE TO ADJACENT STRUCTURES AND UNPROTECTED AREAS.

* GRAVEL SHALL BE VDOT #3, #357 OR #5 COARSE AGGREGATE.

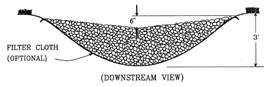
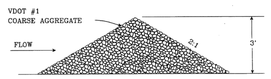
SHEET 18 **OF** ##

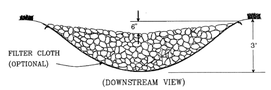
ROCK CHECK DAM

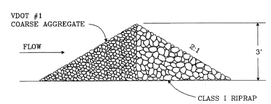
2 ACRES OR LESS OF DRAINAGE AREA:





2–10 ACRES OF DRAINAGE AREA:





Source: Va. DSWC Plate 3.20-1

3. The center of the check dam must be at least 6 inches lower than the outer edges. Field experience has shown that many dams are not constructed to promote this "weir" effect. Stormwater flows are then forced to the stone-soil interface, thereby promoting scour at that point and subsequent failure of the structure to perform its intended function.

4. For added stability, the base of the check dam can be keyed into the soil approximately 6 inches.

5. The maximum spacing between the dams should be such that the toe of the upstream dam is at the same elevation as the top of the downstream dam (see Plate 3.20-2).

6. Stone should be placed according to the configuration in Plate 3.20-1. Hand or mechanical placement will be necessary to achieve complete coverage of the ditch or swale and to insure that the center of the dam is lower than the edges.

7. Filter cloth may be used under the stone to provide a stable foundation and to facilitate the removal of the stone. See Std. and Spec. 3.19, RIPRAP, for required physical properties of the filter cloth.

Sediment Removal

Sediment should be removed from behind the check dams when it has accumulated to one half of the original height of the dam.

TRACKING

Source: Michigan Soil Erosion and Sedimentation Guide Plate 3.29-4

Mulching

1. Seedings made in fall for winter cover and during hot and dry summer months shall be mulched according to MULCHING, Std. & Spec. 3.35, except that hydromulches (fiber mulch) will not be considered adequate. Straw mulch should be used during these periods.

2. Temporary seedings made under favorable soil and site conditions during optimum spring and fall seeding dates may not require mulch.

Re-seeding

Areas which fail to establish vegetative cover adequate to prevent rill erosion will be re-seeded as soon as such areas are identified.

TABLE 3.31-B

ACCEPTABLE TEMPORARY SEEDING PLANT MATERIALS

"QUICK REFERENCE FOR ALL REGIONS"

Planting Dates	Species	Rate (lbs./acre)
Sept. 1 - Feb. 15	50/50 Mix of Annual Ryegrass (Lolium multi-florum) & Cereal (Winter) Rye (Secale cereale)	50 - 100
Feb. 16 - Apr. 30	Annual Ryegrass (Lolium multi-florum)	60 - 100
May 1 - Aug 31	German Millet (Setaria italica)	50

Source: Va. DSWC

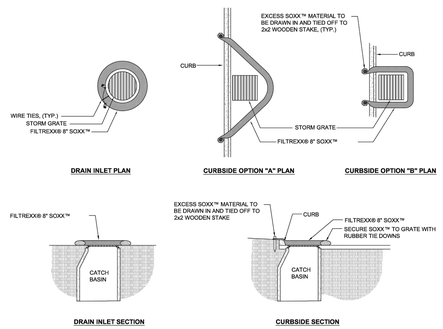
TABLE 3.32-C
SITE SPECIFIC SEEDING MIXTURES
FOR APPALACHIAN/MOUNTAIN AREA

Minimum Care Lawn	Total Lbs. Per Acre
- Commercial or Residential	200-250 lbs.
- Kentucky 31 or Turf-Type Tall Fescue	90-100%
- Improved Perennial Ryegrass *	0-10%
- Kentucky Bluegrass	0-10%
High-Maintenance Lawn	
Minimum of three (3) up to five (5) varieties of bluegrass from approved list for use in Virginia.	125 lbs.
General Slope (3:1 or less)	
- Kentucky 31 Fescue	128 lbs.
- Red Top Grass	2 lbs.
- Seasonal Nurse Crop **	20 lbs.
	150 lbs.
Low-Maintenance Slope (Steeper than 3:1)	
- Kentucky 31 Fescue	108 lbs.
- Red Top Grass	2 lbs.
- Seasonal Nurse Crop **	20 lbs.
- Crownvetch ***	20 lbs.
	150 lbs.

* Perennial Ryegrass will germinate faster and at lower soil temperatures than fescue, thereby providing cover and erosion resistance for seedbed.

** Use seasonal nurse crop in accordance with seeding dates as stated below:
March, April through May 15th ..... Annual Rye
May 16th through August 15th ..... Foxtail Millet
August 16th through September, October ..... Annual Rye
November through February ..... Winter Rye

*** If Flatpea is used, increase to 30 lbs./acre. All legume seed must be properly inoculated. Weeping Lovegrass may also be included in any slope or low-maintenance mixture during warmer seeding periods; add 10-20 lbs/acre in mixes.



NOTES:
1. ALL MATERIAL TO MEET FILTREXX® SPECIFICATIONS.
2. FILTER MEDIA™ FILL TO MEET APPLICATION REQUIREMENTS.
3. COMPOST MATERIAL TO BE DISPERSED ON SITE, AS DETERMINED BY ENGINEER.

OUTDOOR LIGHTING NOTES

1. ALL OUTDOOR LIGHTING FIXTURES SHALL BE DESIGNED, SHIELDED, AIMED, LOCATED AND MAINTAINED TO SHIELD ADJACENT PROPERTIES AND TO NOT PRODUCE GLARE ONTO ADJACENT PROPERTIES OR ROAD RIGHTS-OF-WAY. PARKING LOT FIXTURES AND LIGHT FIXTURES ON BUILDINGS SHALL BE FULL-CUTOFF FIXTURES.
2. LIGHT FIXTURES, INCLUDING MOUNTING BASE, SHALL NOT BE MORE THAN 34 FEET IN HEIGHT ABOVE FINISHED GRADE. HEIGHT NEEDED FOR SECURITY.
3. LIGHT FIXTURES SHALL BE PLACED OUTSIDE OF PAVED AREAS WHERE POSSIBLE. WHERE LIGHT FXTURES ARE TO BE PLACED IN PAVED AREAS THEY SHALL BE PROTECTED WITH BOLLARDS ON FOUR SIDES.
4. ALL LIGHTING SHALL BE ORIENTED SO NOT TO PRODUCE DIRECT GLARE OR EXCESSIVE ILLUMINATION ONTO STREETS IN A MANNER THAT MAY DISTRACT OR INTERFERE WITH THE VISION OF DRIVERS.

Quick Facts

- Lumen packages range from 4,800 - 84,000 lumens (35W - 588W)
- Replaces 70W up to 1,000W HID equivalents
- Efficacies up to 160 lumens per watt
- Energy and maintenance savings up to 85% versus HID solutions
- Standard universal quick mount arm with universal drill pattern

NOTES:
1. Georgia Lights Consortium® Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details.
2. Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to installation instructions for complete mounting information, hardware and torque requirements.
3. Only product configurations with these designated prefixes are built to be compliant with the Buy American Act of 1933 (BAA) or Trade Agreements Act of 1979 (TAA), respectively. Please refer to DOMESTIC PREFERENCES website for more information.
4. Consult factory for performance data for separately-analyzed under-domestic preference requirements.
5. Standard 4000K CCT and 70CRI.
6. 480V not to be used with ungrounded or impedance grounded systems.
7. Quadrivolt drivers feature added protection from power quality issues such as loss of neutral, transients and voltage fluctuations. Visit www.signify.com/quadrivolt for more information.
8. Not available with PRV-Qtd lumen package. Not available with standard CCTs.
9. House Side Shield not available with T5 distribution. Not available with PRV-Qtd lumen package.
10. Not available with PRV-Qtd lumen package. Not available with PRV-P CCS Lumen package.
11. Not available with PRV-Qtd lumen package. Not available with PRV-P CCS Lumen package. Requires a no-bar ceiling of 9 per ASTM E1604.
12. (T) Quadrivolt (DV) is specified, uses a photocontrol that matches the input voltage used.
13. Controls system is not available in combination with a photocontrol receptacle (PR & PR7®) or another controls system (MS, SPD, SPHD, ZW, ZD) or with emergency battery backup (EM).
14. Utilizes the Wattstopper sensor FSP-211. Sensor color white unless specified otherwise via FSK. To field configure, order FSIR-100 accessory separately.
15. Utilizes the Wattstopper sensor FSP-224 series. Sensor color determined by product finish. See Sensor Color Reference Table. Field configures via mobile application. See Controls section for details.
16. Sensor passive infrared (PIR) may be overly sensitive when operating below -35°C (-4°F).
17. Requires 4-PIN twistlock receptacle (ZD or ZW) option.
18. Only available in PRV configurations C15, C25, C40 or C60.
19. For the device to be field-configurable, requires WAC Gateway components WGC-PoE and WPOE-120 in appropriate quantities. Only compatible with WaveLinx system and software and requires system components to be installed for operation. See website for more WaveLinx application information.
20. Replaces D3 with sensor color (WH, BZ, or BK).
21. Replaces D with sensor color (WH, BZ, or BK).
22. Not for use with PRV-XL or PRV-W configurations.
23. Only for use with PRV. Not applicable to PRV-W, PRV-XL, or PRV-P.
24. Must order one per optic(s) ID when ordering as a field-installable accessory (1, 2, 4, 6 or 9).
25. Only for use with PRV configurations. Includes integrated occupancy sensor, photocell and two modes, sensitivity, time delay, cutoff and more. Consult your lighting representative for more information.
26. Only for use with PRV-W configurations.
27. Only for use with PRV-XL configurations.
28. Fixed for PRV-M.

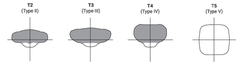
Optical Distributions



Product Specifications

Construction
- Single-piece die-cast aluminum housing
- Tethered die-cast aluminum door

Optics
- Dark Sky Approved (3000K CCT and warmer only)
- Precision molded polycarbonate optics

Electrical
- -40°C minimum operating temperature
- 40°C maximum operating temperature
- > 0.9 power factor
- <20% total harmonic distortion
- Class 1 electronic drivers have expected life of 100,000 hours with >1% failure rate
- 0-10V dimming driver is standard with leads external to the fixture
- Standard MOV surge protective device designed to withstand 10KV of transient line surge

Mounting
- Versatile, patented, standard mount arm accommodates multiple drill patterns ranging from 1-1/2" to 4-7/8" (Type M drilling recommended for new installations)
- A knock-out on the standard mounting arm enables round pole mounting
- Adjustable pole and wall mount arms adjust in 5° increments from 0° to 60°; Downward facing orientation only (Type N drilling required for ADJA mount)
- Adjustable slipfitter arm adjusts in 5° increments from -5° to 85°; Downward facing orientation only
- Adjustable Arms: 1.5G vibration rated
- Prevail and Prevail Petite: 3G vibration rated
- Prevail XL Mast Arm: 3G vibration rated
- Prevail XL Standard Arm: 1.5G vibration rated

Typical Applications
- Parking lots, Walkways, Roadways and Building Areas

Finish
- Five-stage super TGIC polyester powder coat paint, 2.5 mil nominal thickness
- Finish is compliant to 3,000 hour salt spray standard (per ASTM B117)

Shipping Data
- Prevail Petite: 18 lbs. (7.94 kgs.)
- Prevail: 20 lbs. (9.09 kgs.)
- Prevail XL: 45 lbs. (20.41 kgs.)
- Prevail Maxx: 49 lbs. (22.23 kgs.)

Warranty
- Five-year limited warranty, consult website for details. www.cooperlighting.com/legal

Control Options

0-10V This fixture provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

Photocontrol (PR and PR7) Photocontrol receptacles provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-PIN standards can be utilized with the PR7 receptacles.

Dimming Occupancy Sensor (SPB, MS/DIM-LXO) These sensors are factory installed in the luminaire housing. When the SPB or MS/DIM sensor options are selected, the luminaire will dim down after five minutes of no activity detected. When activity is detected, the luminaire returns to full light output. These occupancy sensors include an integral photocell for "dusk-to-dawn" control or "daylight harvesting." Factory default is enabled for the MS sensors and disabled for the SPB. SPB motion sensors require the Sensor Configuration mobile application by Wattstopper to change factory default dimming level, time delay, sensitivity and other parameters. Available for iOS and Android devices. The SPB sensor is fact

SIGN SPECIFICATIONS

A. METAL CONSTRUCTION, 12"X18"
B. RED LETTERS ON REFLECTIVE WHITE BACKGROUND WITH 1" RED TRIM STRIP AROUND ENTIRE OUTER EDGE OF SIGN.
C. LETTERING ON SIGN TO BE 'NO PARKING OR STANDING LANE'.
D. LETTERING SIZE TO BE AS FOLLOWS: 'NO PARKING' AND 'STANDING' IS 2", 'OR' IS 1" 'FIRE LANE' IS 2 ½" AND THE ARROW WITH THE SOLID SHAFT IS 1"X6" WITH THE SOLID HEAD 1 ½" WIDE AND 2" DEEP.
E. SIGNS ARE TO BE MOUNTED 7' FROM THE GROUND TO THE BOTTOM OF THE SIGN UNLESS OTHERWISE DIRECTED BY THE FIRE MARSHAL.
F. POST FOR SIGNS, WHEN REQUIRED, SHALL BE BETAL ADN SECURELT MOUNTED, UNLESS WRITTEN PERMISSION FOR ALTERNATIVES IS OBTAINED PRIOR RO INSTALLATION FROM THE FIRE MARSHAL. SIGNS SHOULD BE SPACED AS DIRECTED BY THE FIREMARSHAL.. IN LONG STRETCHES, THE MAXIMUM DISTANCE BETWEEN SIGNS IS 70'.
G. OTHER SPECIAL SIGNS MAY BE APPROVED BY THE FIRE MARSHAL.

CURB DESIGNATIONS

A. ALL CURB OR PAVED SPACES DESIGNATED AS FIRE LANES SHALL BE INDICATED BY YELLOW PAINT AS APPROVED BY THE FIRE MARSHAL. IN AREAS WITHOUT CURBING, A 6" WIDE YELLOW STRIPE SHALL BE APPLIED ON THE EDGE OF THE PAVEMENT.

NOTE:
FIRE LANE MARKINGS, TYPE OF SIGNS, LOCATIONS, ETC. SHALL BE SUBJECT TO APPROVAL BY THE FIRE MARSHAL.

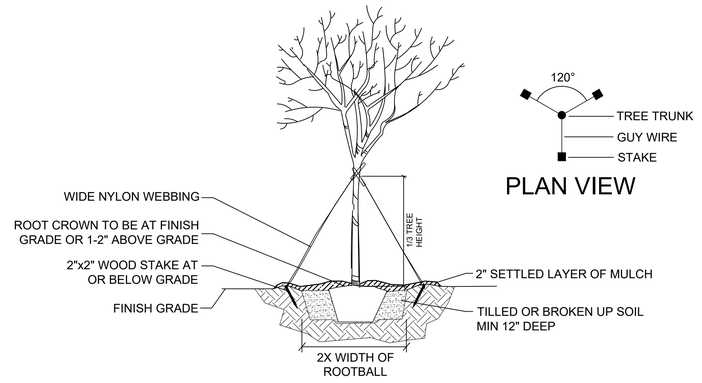
PLANTING DETAILS



PLAN VIEW

GENERAL PLANTING NOTES

1. THE LANDSCAPING WILL CONFORM TO SECTION 165-203.01 OF THE FREDERICK COUNTY ZONING ORDINANCE.
2. SUBSTITUTION OF LANDSCAPE MATERIALS MUST BE APPROVED IN WRITING BY THE FREDERICK COUNTY PLANNING DEPARTMENT.
3. THE LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR FAMILIARIZING HIMSELF WITH ALL OTHER SITE IMPROVEMENTS PRIOR TO BEGINNING LANDSCAPE WORK.
4. THE GENERAL CONTRACTOR IS TO PROVIDE SUBGRADES 4" BELOW HARD SURFACES PLUS/MINUS .1 FOOT.
5. LANDSCAPE PLANTING AREAS SHALL BE FREE OF DEBRIS AND ROCKS LARGER THAN 3" IN ANY DIRECTION.
6. TOPSOIL WITH A MINIMUM OF 30% ORGANIC CONTENT SHALL BE PLACED AT A MINIMUM DEPTH OF 4" IN LANDSCAPE PLANTING AREAS.
7. TOPSOIL SHALL BE TILLED INTO THE EXISTING SUBGRADE TO ELIMINATE SOIL INTERFACE PROBLEMS.
8. ALL LANDSCAPE PLANTING AREAS RECEIVE A MINIMUM OF 2" MEDIUM-FINE BARK MULCH.
9. ALL PLANT MATERIALS ARE TO CONFORM TO THE AMERICAN ASSOCIATION OF NURSERYMEN, STANDARDS FOR NURSERY STOCK, LATEST EDITION.
10. PLANT SPECIES SUBSTITUTIONS ARE DISCOURAGED. IF PLANT AVAILABILITY IS A PROBLEM, CONTACT THE LANDSCAPE DESIGNER FOR ACCEPTABLE ALTERNATIVES.
11. IF THE SITE WORK IS DIFFERENT OR MODIFIED FROM WHAT IS DEPICTED ON THE LANDSCAPE PLAN, OR POOR SOIL AND/OR DEBRIS ARE ENCOUNTERED, REQUIRING CHANGES TO THE LANDSCAPE PLAN, CONTACT THE LANDSCAPE DESIGNER FOR INSTRUCTION.
12. THE CONTRACTOR SHALL MAINTAIN AND WATER PLANT MATERIAL UNTIL OWNER'S FINAL ACCEPTANCE.
13. FIELD ADJUST THE LOCATION OF TREES AND SHRUBS TO AVOID CONFLICT WITH LOCATION OF ANY UTILITIES. CONTACT LANDSCAPE DESIGNER IF PROBLEMS ARE ENCOUNTERED.
14. NEW LANDSCAPE AREAS WILL NEED TO BE WATERED FOR THE FIRST ONE TO TWO GROWING SEASONS TO ESTABLISH PLANTINGS.
15. LANDSCAPIG SHALL NOT BE PLANTED WITHIN FREDERICK WATER EASEMENTS.

STORM WATER NARRATIVE:

DRAINAGE AREA

THIS PROJECT INVOLVES THE EXPANSION OF AN AUTO DEALERSHIP AND CONSTRUCTION OF A VEHICLE STORAGE AREA.

LIMITS OF STUDY

THE LIMITS OF THE STUDY AREA INCLUDE THOSE DRAINAGE AREAS CONTRIBUTING RUNOFF TO THE EXISTING STORMWATER MNGT BASIN AND AN AREA TO THE SOUTH WHICH DRAINS CROSS THE SITE.

OVERALL RUNOFF ANALYSIS (QUANTITY)

WE HAVE ANALYZED THE DRAINAGE AREA FOR EXISTING CONDITIONS, POST DEVELOPMENT CONDITIONS AND A FORESTED CONDITION (FOR THE PROJECT SITE ONLY). THE SITE DRAINS TO A 48" CULVERT THAT CROSSES UNDER I-81. THE HYUNDAI STORE AREA HAS NOT BEEN INCLUDED EXCEPT FOR THOSE ARES THAT ARE DIRECTLY CONNECTED TO THE HONDA STOM SEWER SYSTEM.

WE HAVE PROVIDED THE 1 YEAR EVENT COMPUTATION IN THIS PLAN

A COMPUTATION BOOKLET HAS BEEN PREPARED THAT INCLUDES ALL STORM EVENTS (1, 2, 10 & 100). THIS COMPUTATION BOOKLET SHALL BE CONSIDERED PART OF THIS PLAN.

IT IS THE OPINION OF THIS ENGINEER THAT THE ALLOWABLE DISCHARGE REQUIREMENTS FOR THIS DEVELOPMENT HAVE BEEN MET, AND THERE WILL BE NO ADVERSE EFFECTS ON THE EXISTING CULVERT UNDER I-81.

QUALITY ANALYSIS

QUALITY REQUIREMENTS WILL BE MET THROUGH THE PURCHASE OF QUALITY CREDITS. COMPUTATIONS CAN BE FOUND ON ASSOCIATED SHEETS

Re: Nutrient Credit Availability – CMA Honda Store Expansion - Site Plan – Frederick County

Mr. Stowe,

The Virginia Nutrient Bank (VNB) is pleased to confirm availability of 6.44 pounds per year of phosphorus offsets (nutrient credits) for the CMA Honda Store Expansion site plan located at 39°07'00.8"N 78°11'52.8"W. The project drains to HUC: 02070004.

VNB has approval from the Virginia Department of Environmental Quality (VDEQ) for Nonpoint Source Offset Generation Certification. VNB is approved to transfer nutrient credits in accordance with the Chesapeake Bay Watershed Nutrient Credit Exchange Program (VA Code 62.1-44.19:14 et seq). These offsets are also transferable in accordance with the Virginia stormwater offset program (VA Code 62.1-44.15:35) and the Virginia Soil and Water Conservation Board's Guidance Document on Stormwater Nonpoint Nutrient Offsets approved on July 23, 2009, to those regulator entities qualifying for nutrient offsets.

VNB manages the Ridge Road Nutrient Bank located in Rockingham County and Shenandoah County that will generate 88.94 pounds of phosphorus reduction and 512.51 pounds of nitrogen reduction and 7,645 pounds of sediment reduction per year. VNB as of the date of this letter has capacity at the Ridge Road Nutrient Bank site and will reserve the right to provide the required offsets from another DEQ approved VNB nutrient bank if needed. VNB will retire 6.44 pounds of phosphorus credits in accordance with the Nutrient Offset Certification regulations.

Respectfully,

Amber Aboagye
Conservation Project Director
